Professional Summary

Server Administrator Trainee and RHCSA certified professional with hands-on experience designing, automating, and managing cloud infrastructure using AWS, Linux, Docker, Kubernetes, Jenkins, Terraform, and Ansible. Experienced in Infrastructure as Code (IaC), Linux system administration, production web hosting, and CI/CD automation across AWS environments.

Skills

Cloud

AWS (EC2, IAM, VPC, Route 53, ALB, S3, SES, SNS, CloudWatch)

Operating Systems

RHEL, Amazon Linux 2023

Programming

Python, Bash, JavaScript, TypeScript, SQL

Databases

MariaDB, MySQL

DevOps

Docker, Kubernetes, Jenkins, Terraform, Ansible, Git, GitHub, GitHub Actions, GHCR, Traefik, Apache, Nginx

Monitoring

Prometheus, Grafana, Loki, Promtail

Web

React.js, Flask, HTML, CSS

Security

SSL/TLS, Let's Encrypt, FirewallD, SELinux

Experience

Server Administrator Trainee

IPSR Solutions Limited

06/2026 – Present
Kottayam, Kerala

- Deployed, configured, and maintained production-ready web applications on AWS using EC2, Application Load Balancer, Route 53, and Amazon SES.
- Provisioned and configured Nginx, PHP 8, MariaDB, WordPress, phpMyAdmin, SSL, and SFTP on Amazon Linux 2023 using Ansible.
- Administered Linux servers by managing users, permissions, storage, and network performance, improving system efficiency by 20%, while performing GRUB recovery and troubleshooting boot, filesystem, and server issues.
- Secured web hosting environments by implementing Let's Encrypt SSL, custom domains, firewall rules, and PHPMailer with Amazon SES, reducing vulnerabilities by 15%.

Cloud and DevOps Intern

IPSR Solutions Limited

02/2026 – 06/2026
Kottayam, Kerala

- Managed AWS services including EC2, IAM, VPC, S3, and Route 53 for cloud deployments.
- Performed Linux (RHEL) administration, including package management, service configuration, user administration, networking, and storage management.
- Developed CI/CD pipelines using Jenkins and Ansible, reducing release cycles by 70% and enabling faster feature delivery to customers.

Python Intern

Verzeo

01/2022 – 02/2022
Kottayam, Kerala

- Engineered and evaluated 3+ machine learning models using Python, Scikit-learn, and Pandas.
- Implemented and compared 3 machine learning algorithms including Linear Regression, Decision Trees, and K-Means Clustering.
- Gained practical exposure to real-world data preprocessing and model tuning.

Education

B.Tech in Computer Science <i>Amal Jyothi College of Engineering</i>	2021 – 2025 Kottayam, Kerala
--	---------------------------------

Projects

SkyLearn DevOps Platform  - Designed and deployed a production-grade cloud-native learning platform on AWS using Docker, Kubernetes, Traefik, Terraform, Ansible, and GitHub Actions. - Automated infrastructure provisioning, application deployment, and rolling updates through Terraform, Ansible, and a GitHub Actions CI/CD pipeline integrated with GitHub Container Registry (GHCR). - Implemented an observability stack with Prometheus, Grafana, Loki, and Promtail for metrics collection, centralized logging, and infrastructure monitoring across Kubernetes workloads.	07/2026 – 08/2026
AWS Infrastructure Automation  - Designed and provisioned a multi-node AWS infrastructure using Ansible on Amazon Linux 2023. - Streamlined customized webpage deployment by developing Ansible playbooks, cutting deployment duration by over 90% and increasing deployment frequency. - Spearheaded the recreation of a complete multi-node AWS infrastructure in a separate region, demonstrating 100% environment parity using existing Ansible playbooks for enhanced disaster recovery capabilities.	06/2026 – 06/2026
Production WordPress Deployment  - Engineered and automated a production-ready WordPress environment on Amazon Linux 2023 using Ansible. - Configured Nginx, PHP 8, MariaDB, phpMyAdmin, SFTP, Let's Encrypt SSL, and a custom DuckDNS domain. - Instituted secure web hosting practices and centralized server configuration, decreasing average server response time by 30% through optimized performance.	06/2026 – 06/2026
HarvestHub  <i>Major Project</i> - Developed a full-stack crop trading platform using React.js and Flask, enabling direct farmer-to-retailer bidding. - Trained and integrated an LSTM model using 28 years (1994–2022) of crop price data, achieving 98.6% prediction accuracy and enabling data-driven bidding recommendations. - Implemented Ethereum smart contracts to provide transparent and tamper-resistant transaction records.	08/2024 – 04/2025

Achievements

- Published 3 open-source Cloud & DevOps projects demonstrating Infrastructure as Code and automation practices.
- Served as Team Leader in the MakerHub IEDC 24-Hour Hackathon, leading a 5 member team to develop and present a functional prototype addressing a real-world challenge.

Certifications

- Red Hat Certified System Administrator - Red Hat - Google Cybersecurity Professional Certificate - Google - SAP Deployment on Google Cloud - Google Cloud	- AWS Training Certificate - IPSR Solutions Ltd. - Cloud Infrastructure Foundations - Oracle - Python for Data Science - NPTEL
